SALIM MOHAMED MWAMKOBA

Software Developer | Environmental Technology & Community Impact

Kenya • Email: **sirleemmuhammad18@gmail.com** • GitHub: **github.com/salimmohd17** • LinkedIn: **Salim Mohamed**

PROFESSIONAL PROFILE

Software Developer with practical experience in designing and developing modern web applications, software systems, databases, and digital platforms. Skilled in frontend and backend development using JavaScript, React, Next.js, PHP, Node.js, Express.js, MySQL, and related technologies.

I enjoy transforming real-world problems into practical digital solutions, from business websites and management systems to e-commerce and trading platforms. My project portfolio includes ALGS Architectural Design, Openlands Digital Platform, Wahapahapa Waste Management Digital System, a trading technology platform, and an e-commerce platform.

Beyond software engineering, I am passionate about environmental conservation and community development. Through my involvement with Wahapahapa Waste Management in Kwale County, I contribute to waste-management operations, monitoring and evaluation (M&E;), digital documentation, environmental awareness, plastic recovery, and community cleanups.

CORE COMPETENCIES

- Web Application Development
- Responsive Web Design
- Git & Source Control
- Monitoring & Evaluation (M&E)
- Frontend & Backend Engineering
- REST API Development
- Technical Documentation
- Environmental Technology
- Database Design & Management
- Software Testing & Debugging
- System Analysis & Problem Solving
- Community Environmental Action

EDUCATION

Masinde Muliro University of Science and Technology (MMUST) — *Bachelor of Science in Information Technology* (Currently Pursuing)

> **Relevant Areas of Study:** Software Engineering, Web Programming, Database Systems, Information Security, Computer Networks, Systems Development, Programming Languages, and Emerging Technologies.

TECHNICAL SKILLS

Frontend Development:	HTML5, CSS3, JavaScript (ES6+), React, Next.js, Vite, Responsive Web Design, Tailwind CSS
Backend Systems:	PHP, Node.js, Express.js, RESTful APIs, Server Routing
Databases:	MySQL, SQLite, SQL Query Optimization, MongoDB
Programming Languages:	Java, JavaScript, C, C++
Tools & IDEs:	Git, GitHub, Visual Studio Code, IntelliJ IDEA, Android Studio, JavaFX
Emerging & Hardware:	IoT (ESP32, MQTT), Information Security, Software Testing, AI/ML Fundamentals

PROFESSIONAL & PRACTICAL EXPERIENCE

Wahapahapa Waste Management — *Monitoring & Evaluation / Technology Contributor* (2023 – Present)

A community-based organization involved in waste management, environmental conservation, and community action in Kwale County.

Key Responsibilities & Accomplishments:

- Support monitoring and evaluation (M&E;) of organizational activities and community environmental programs.
- Collect, organize, document, and manage operational, environmental, and plastic collection data.
- Prepare activity reports, work plans, program documentation, and digital information management systems.
- Participate in plastic recovery, sorting, weighing, and recycling initiatives across Kwale County.
- Lead community environmental cleanups, beach cleanups, landscaping, tree planting, and illegal-dumpsite remediation.
- Contribute to building digital management systems for improving CBO operations, volunteer tracking, and data reporting.

SELECTED SOFTWARE PROJECTS

1. **ALGS — Architecture & Construction Website** | *React, Vite, JavaScript, Tailwind CSS*

   Live Site: https://algs-architectural-design.netlify.app/

   Developed a professional corporate website presenting architectural design, construction services, project portfolios, and company credibility.

2. **Openlands Digital Platform** | *React, JavaScript, CSS Grid, Responsive UI*

   Live Site: https://openland-links-ltd.netlify.app/

   Created a digital platform concept presenting land availability, environmental sustainability initiatives, and community partnership opportunities.

3. **Wahapahapa Digital Management Platform** | *React, Node.js, Express.js, MySQL*

   Live Site: https://wahapahapa-waste-management.netlify.app/

   Designing an operational management platform for tracking plastic waste volume, activity M&E;, volunteer logs, and multi-role administration.

4. **My Life Notes — Full-Stack Application** | *React 19, Node.js, Express, SQLite, REST APIs*

   Live Site: https://github.com/salimmohd17/intern-notes-app

   Full-stack notes platform with client-server CRUD, instant search, dynamic categories, note pinning, color themes, and persistent SQLite storage.

5. **Personal Trading Technology Workstation** | *JavaScript, Web APIs, Chart Engine*

   Engineered a trading prototype exploring financial market feeds, risk management calculators, technical indicators, and workflow automation.

6. **Full-Stack E-Commerce Platform** | *HTML5, CSS3, JavaScript, PHP, MySQL*

   Building an e-commerce engine with product cataloging, session cart management, order workflows, and administrative dashboards.

ENVIRONMENTAL IMPACT & PERSONAL STRENGTHS

Environmental Champion: Dedicated to combining software engineering with environmental conservation. Experienced in plastic recovery, community sensitization, beach cleanups, tree planting, and M&E; reporting.

Personal Strengths: Problem Solving, Analytical Thinking, Continuous Learning, Team Collaboration, Technical Documentation, Community Engagement, and Practical Solution Delivery.
